

A banner image featuring a high-voltage power transmission tower in the center, with power lines extending across the frame. The foreground is dominated by a large array of solar panels, and the background shows a clear sky with a warm, golden glow, suggesting a sunrise or sunset.

Energy Commodities & Trading

Our team has deep knowledge of the rules governing commodity regulation and trading based on their diverse backgrounds. Team members include lawyers who have held in-house positions at banks and trading companies, as well as lawyers with over 25 years of senior-level experience at US Commodity Futures Trading Commission (CFTC) and the Federal Energy Regulatory Commission (FERC). Our intimate understanding of the ins and outs of regulatory regimes — as well as our longstanding relationships with regulators — enables us to provide practical advice that helps energy companies anticipate and resolve regulatory issues.

We advise on regulatory and legislative matters pertaining to commodities, derivative markets, market infrastructure, major industrials, oil and gas producers, and utilities. We have broad experience across the full range of commodity regulations, which we bring to bear in helping our clients navigate the regulatory issues related to their trading strategies and objectives.
